

Security risk assessment report

Part 1: Select up to three hardening tools and methods to implement

1. Stronger Password Policies
2. MFA
3. Configure Firewalls

Part 2: Explain your recommendations

1. Will eliminate the issues of password sharing and the admin account having the default password
2. Adds an added layer of security that is standard across most industries.
3. The firewalls are useless if they are not configured to block traffic correctly.
